HCL AppScan Standard

Security scans to identify, understand and remediate application vulnerabilities

Overview

AppScan Standard is a dynamic analysis tool designed for security experts and pen-testers to use when performing security tests on web applications and web services. It runs automatic scans that explore and test web applications based on one of the most powerful scanning engines available. Quickly triage and prioritize issues using the wealth of information provided, including test descriptions and vulnerabilities found. Issue remediation is easy using the advisories and fix recommendations for each issue detected. Testing your web applications before deployment and continuously assessing their risks in your production environment can help prevent expensive web application security breaches. AppScan Standard features:

- Testing for web apps, web services and even mobile back-ends
- Protection for the most complex use cases
- Test optimization
- Enhanced insight

Benefits

Reduce risk exposure, maximize remediation efforts, enhance security program management and increase regulatory compliance with HCL AppScan Standard.

Avoid security vulnerabilities before hackers discover and exploit them

In-depth security analysis

Detailed results and actionable fix recommendations

Achieve regulatory compliance

Features

Test web apps, web services and even mobile back-ends

Employ the latest algorithms and techniques to ensure the most accurate explore coverage and testing. Leverage AppScan's unique Action Based technology and tens of thousands of built-in tests to best handle real world applications from simple web apps, through single page applications to JSON based REST APIs

Test Optimization

Statistical analysis test optimization provides control on the trade-off between speed and coverage, and enables faster scans with minimal impact on accuracy.

Handles the most complex use cases

AppScan can tailor its testing for all needs. With its advanced configuration, users are empowered to scan even the most complex scenarios. AppScan supports recording and testing complex multi-step sequences, dynamically generate unique data and tracking all kinds of headers and tokens.

Enhanced insight

Extensive reporting offers great insights of the issues found to simplify issue triaging and resolution. Comprehensive list of compliance and industry standard reports (such as PCI, HIPPA, OWASP top 10, SANS 25, etc.) assist you in meeting regulatory requirements.

About HCL Software

HCL Software is a division of HCL Technologies (HCL) that operates its primary software business. It develops, markets, sells, and supports over 20 product families in the areas of DevSecOps, Automation, Digital Solutions, Data Management, Marketing and Commerce, and Mainframes. HCL Software has offices and labs around the world to serve thousands of customers. Its mission is to drive ultimate customer success with their IT investments through relentless innovation of its products. For more information, please visit www.hcltechsw.com.
