HCL AppScan on Cloud

A cloud-based application security solution

Overview

AppScan on Cloud is a cloud application security offering that helps secure your organization's assets from web to mobile to open source. It detects dozens of today's most pervasive security vulnerabilities and enhances your application security. AppScan on Cloud helps to eliminate vulnerabilities from applications before they are placed into production and deployed. Convenient, detailed reporting permits you to effectively address application security risk, enabling application users to benefit from a more secure experience. AppScan on Cloud features:

- Integration directly into the software development lifecycle
- Enhanced static analysis with cognitive capabilities
- Point and shoot dynamic analysis or hands-on leveraging AppScan Standard
- Open source risk exposure detection

Benefits

Reduce risk exposure, maximize remediation efforts, enhance security program management and increase regulatory compliance with HCL AppScan on Cloud.

	Development lifecycle integration		Cloud computing leveraging power
	One-stop-shop for all your application security needs		Frequent enhancements to identify the most recent attacks
	AI powered scanning to improve accuracy		Full control over your open source vulnerabilities

Features

Cloud application security testing in DevOps

Integration with key build environments and IDEs to provide frictionless experience for application security vulnerabilities testing and fast targeted remediation. AppScan on Cloud offers multiple forms of testing (SAST, DAST and open source) to provide the broadest coverage.

Enhance your security with cognitive capabilities

World-renowned cognitive capabilities enable AppScan on Cloud to deliver deeper and faster scan coverage and eliminate false positives. This provides more current and broader coverage, while creating faster turn-around times that support your DevOps processes.

Manage and reduce risk in your application portfolio

Application security is not only about performing tests and finding vulnerabilities, it's about managing risk. AppScan on Cloud empowers you to view your applications from business and technical perspectives, allowing you to prioritize your scarce resources to address your most pressing needs.

Address your open source risk

AppScan on Cloud helps to secure and manage your open source components, by automating security testing and configuring scanning for open source. It enables you to gain control and visibility over your open source vulnerability scans, by continuously identifying vulnerable open source components in your software.

About HCL Software

HCL Software is a division of HCL Technologies (HCL) that operates its primary software business. It develops, markets, sells, and supports over 20 product families in the areas of DevSecOps, Automation, Digital Solutions, Data Management, Marketing and Commerce, and Mainframes. HCL Software has offices and labs around the world to serve thousands of customers. Its mission is to drive ultimate customer success with their IT investments through relentless innovation of its products. For more information, please visit www.hcltechsw.com.
